

TEMPLATE SHORT CONSENT STATEMENT FOR RESEARCH

Experimental Comparison of Simulation versus Algebraic Approaches to Statistics Instruction

You are being asked to participate in a research study conducted at {campus}. The purpose of this study is to better understand what kinds of learning activities are most effective for improving student learning in introductory statistics. You were selected as a possible participant because you are enrolled in a course in which the instructor opted to have their class participate. All students will engage in the normal conduct of the course. On a minimum of two course assignments, there will be variations in the kinds of problems that you are assigned to complete. If you agree to be in the study, your course data (which may include assignment grades, time spent on assignments, and exam grades) will be provided to the researchers. If you do not agree to be in the study, you will engage in the same activities, but you will only receive one version of the assignments mentioned above, and your course data will not be provided to the researchers. Regardless of your decision, please let your teacher know if anything is confusing at any time during the course, and your teacher will try to help you understand as usual. Your information will not be shared with unauthorized individuals in connection with this study. You may choose not to take part in the study or you may choose to leave the study at any time. If you have any questions, you can contact the researcher at {researcher contact}.
